Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Receptor for TNYSF138/BLy8/BAFF and TNYSF13/APRIL.
Promotes B-cell survival and plays a role in the regulation of humoral immunity. Activates NF-kappa-B and UNK (By similarity).
-!- SUBUNIT: Associates with TRAFI, TRAF2, TRAF3, TRAF5 and TRAF6 (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    similarity).
SUBUNIT: Binds TRAF2, TRAF5 and TRAF6. Binds the NH2-terminal domain of CAMLG with its C-terminus (By similarity).
SUBCELLULAR LOCATION: Type III membrane protein (Probable).
SIMILARITY: Contains 2 TNFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -> F (in Ref. 2).

CC -1- TISQUE SPECIFICITY: PC5A is expressed in most tissues but is most abundant in the intestine and adrenals. PC5B is expressed in the abundant in the intestine and drenals. PC5B is expressed in the abundant in the intestine and drenals. PC5B is expressed in the intestine, adrenals and lung but not in the brain.

CC -1- DEVELOPMENTAL STAGE: Weakly expressed throughout the embryo, except in the developing nervous system, the ribs and the liver, cc but markedly up-regulated at discrete sites during development. At E5.5, prominent expression observed in differenciated decidua. At E7.5, intense expression in observed in differenciated decidua. At E7.5, intense expression in codermal and somites and yolk sac followed by a confination to dermamyotome compartment. Between E9.5 and E11.5, abundant expression in AER (thickened ectodermal crolls of limb buds). At E12.5, expression in the limbs is confined to the condensing mesenchym surrounding the cartilage. At this stage, strong expression also detected in vertebral and facial cartilage primordia and in the muscle of the tongue. At E15.5, abundant expression in epithelial cells of the intestinal villi. Isoform B occur at E12.5.

-1 DOMAIN: The propeptide domain acts as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic contains.

--- DOMAIN: The propeptide domain acts as an intramolecular chaperone contains.

--- DOMAIN: The propeptide domain acts as an intramolecular chaperone contains.

--- DOMAIN: The propeptide domain acts as an intramolecular chaperone contains.

--- DOMAIN: The propeptide domain acts as an intramolecular chaperone contains.

--- DOMAIN: The propeptide domain acts as an intramolecular chaperone contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. FUNCTION: Likely to represent a widespread endoprotease activity within the constitutive and regulated secretory pathway. Capable of cleavage at the RX(K/R) consensus motif. May be responsible for the maturation of gastrointestinal peptides. May be involved in the cellular proliferation of adrenal cortex via the activation of growth factors.

CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg.-Kaa-Yaa-Arg-|-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys.

SUBCELLULAR LOCATION: PC5A is secreted through the regulated a gecretory pathway. PC5B is a type I membrane protein localized to a paranuclear post-Golgi network compartment in communication with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sorting information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.
-!- SIMILARITY: Belongs to peptidase family S8.
-!- SIMILARITY: Contains 1 homo B/P domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -1- TISSUE SPECIFICITY: Highly expressed in spleen, thymus, small intestine and peripheral blood leukocytes. Expressed in resting B-cells and activated T-cells, but not in resting T-cells.
-1- SIMILARITY: Contains 2 THRE-Cys repeats.
-1- CAUTION: It is uncertain whether Met-1 or Met-31 is the initiator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Yu G., Boone T., Delaney J., Hawkins N., Kelley W., Ramakrishnan M., McCabe S., Qiu W.R., Kornuc M., Xia X.-Z., Guo J., Stolina M., Boyle W.J., Sarosi I., Hsu H., Senaldi G., Theill L.E.; "APRIL and TalL-I and receptors BCMA and TACI: system for regulating humoral immunity.";

SUBGELLULAR LOCATION: Type I membrane protein, exclusively on the apical region of the speam head.
1. SUBCELULAR LOCATION: Type I membrane protein, exclusively on the apical region of the speam head.
1. TASSUE SPECIFICITY: In testis, primarily in haploid spermatids.
1. DOWAIN: The MAM domains probably mediates sperm adhesion to the zona pellucida.
1. DOWAIN: During sperm migration through the reproductive tracts, the mucin-like domain might inhibit inappropriate trapping of spermatozea or promoting adhesion to the oviductal isthmus.
1. DOWAIN: The VWFD domain 2 may mediate covalent oligomerization (By

J. Cell Sci. 109:1053-1061(1996).

J. CHILL SCHECKTON: Involved in the modulation of neuronal aggregation.

J. SUBCELLULAR LOCATION: Extracellular.

J. SINE SPECTFFCITY: Subcommissural organ.

J. SIMILARITY: Belongs to the thrombospondin family.

J. SIMILARITY: Contains at least 2 EGF-like domains.

J. SIMILARITY: Contains at least 1 F5/8 type C domain.

J. SIMILARITY: Contains at least 3 LDL_receptor class A domains.

J. SIMILARITY: Contains at least 4 TSP type-1 domains.

SIMILARITY: Contains at least 4 TSP type-1 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              VAFC.

LDL-receptor class A 1.

LDL-receptor class A 2.

LDL-receptor class A 3.

LSP type-1 3.

TSP type-1 4.

DISEASE: Defects in Thfrell3c are a cause of severe B-cell deficient strain A/WySnJ has a 4.7 kb insertion in the BAFFR gene leading to an altered C-terminus. The mutent RNA is not detectable. B-cells its much reduced. Span of peripheral B-cells its much reduced.

SIMILARITY: Contains 1 TNFR-Cys repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                     Harless S.M., Lentz V.M., Sah A.P., Hau B.L., Clise-Dwyer K., Halbert D.M., Hayes C.E., Cancro M.P.; Competition for BLys-mediated signaling through Bcmd/BR3 regulates peripheral B lymphocyte numbers."; Curr. Biol. 11:1986-1989 (2001).

-: FINCTION: B-cell receptor specific for TNFSF13B/TALLI/BAFF/BLyS. Promotes the survival of mature B-cells and the B-cell response.:- SUBCELLULAR LOCATION: Type III membrane protein (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. -!-FUNCTION: Putin is likely to represent the ubjquitous endoprotease activity within constitutive secretory pathways and capable of activity within constitutive secretory pathways and capable of cleavage at the RX(K/R)R consensus motif (By similarity).

-!-CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Xaa-Yaa-Arg-|-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys. Releases albuinh,

Biol. Chem. 270:26028 (1995).
-!- FUNCTION: Binds in a species-specific manner to the zona pellucida of the egg. May be involved in gamete recognition and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: Type I membrane protein, exclusively on the spical region of the sperm head (FB similarity).

TISSUE SPECIFICITY: In testis, primarily in haploid spermatids. Not in lung, liver, heart, spleen, brain, kidney, epididymis. DOWAIN: The MAM domains probably mediate sperm adhesion to the zona pollucida.

DOWAIN: During sperm migration through the reproductive tracts, the muchin-like domain might inhibit inappropriate trapping of spermatozoa or promoting adhesion to the oviductal isthmus.
